

Group Project Trial Presentation

This assignment is a part of the assessment sequence “Group project”.

Your group is tasked with presenting your project to a general audience, including key stakeholders. You are being given the opportunity to conduct a trial presentation in video form before giving your final presentation in person and submitting the report.

Your presentation should be organised along the five steps of the data science process

1. Problem solving with data,
2. Getting the data I need,
3. Is my data fit for use?
4. Making the data confess, and
5. Storytelling with data.

That means your presentation will provide stakeholders with key information relevant to your project, while also describing the modelling and analysis approaches you have taken. Feedback from this assessment may be used to refine your approach before your final presentation and report submission.

What to submit

A video in mp4 or other popular format, with a length not exceeding 10 minutes (we encourage videos of at least 8 minutes). The recording can be conducted easily with Zoom ([instructions](#)), or another tool if you choose.

One member of your group will submit the video through the submission link on Blackboard Ultra on or before the due date and time. You may submit multiple attempts, in which case the final submission will be viewed by the DATA7001 teaching team.

Requirements for the video

- Do not speed up or slow down your video recording.
- All group members will introduce themselves and participate in the video, each delivering at least 30 seconds of the presentation.
- All group members will show their cameras throughout the presentation. A static photo is not sufficient.
- Use slides throughout the presentation.

Guidelines: how to produce effective slides

- A title slide will include the group name and member names, as well as the project title
- Include slide numbers
- Use a consistent format/style
- Images should only be included where relevant, and where they add to the storytelling
- Don't overload slides with too much text
- Don't include Python code in your slides
- Data source, data size, and attributes should be elaborated. If missing data is involved, discuss how you managed the missing data.

Use of generative AI and machine translation

Artificial Intelligence (AI) and Machine Translation (MT) are emerging tools that may support students in completing this assessment task. Students may appropriately use AI and/or MT in completing this assessment task. Students must clearly reference any use of AI or MT in each instance. A failure to reference generative AI or MT use may constitute student misconduct under the Student Code of Conduct.

Marking criteria

Criteria	Weighting	0	5	10
Video length	5%	Video exceeds 10 minutes length; or video has been sped up or slowed down.		Video length does not exceed 10 minutes.
Slides	10%	No slides are used.	Slides are used but don't adhere well to guidelines.	Effective use of slides.
Aims	10%	Research questions are not specified.	Research questions are specified but unclear.	Research question/s clearly specified.
Data	10%	Data has not been described in sufficient detail.	Data has been described with some missing detail.	Data is well described.
Creativity and innovation	30%	Does not display an adequate level of creativity and innovation.	Displays a moderate level of creativity and innovation	Displays a high level of creativity and innovation.
Completeness	30%	Does not describe most steps of the data science process in appropriate detail.	Describes most steps of the data science process in appropriate detail; or does not proceed in a standard order.	Describes all steps of the data science process well, in a standard order.
Presenting style	5%	Most presenters lack clarity in speech and/or do not demonstrate adequate preparedness.	Most presenters speak clearly and show a high level of preparedness.	All presenters speak clearly and show a high level of preparedness.
